

Preparing Manuscript for an International Reputable Journal: A to Z Tips for Success

Presented by:

Dr Bayes Ahmed

Lecturer

Institute for Risk and Disaster Reduction
University College London (UCL), UK

17 September 2021

1. Types of publications: **journal articles**, books (single/multi authored or edited volume), book chapters, conference papers, blogs, technical reports, media or podcasts (episodes are audio files).
 2. Journal articles should be peer-reviewed and recognized. Avoid publishing in predatory or national level journals (LAP LAMBERT Academic Publishing).
 3. Indexed in Scopus and Web of Science (Clarivate).
 4. Master journal list: <https://mjl.clarivate.com/home>
-

5. We are always **under pressure** of time and resources for publishing articles –getting scholarships or funding, PhDs, getting promotions or jobs, and for personal reasons.
 6. Your article has to be **novel (new ideas or methods) and original**. Avoid replicating the same thing on different case study areas just for the sake of increasing the number of articles.
 7. After dealing with content and structure, please make sure your **Title and Abstract** are written properly, scientifically and professionally.

This is the abstract:

Surface wave tomography usually adds a smooth term into the objective function in order to make the edge smoothing. This paper will make an improvement on inversion method under Gaussian probability distribution condition during the iterative process of near surface inversion, which is based on ray-tracing, uses the sensitivity parameters in G matrix as spatial smoothing constraints We try to make parameters selecting self-adapted and following the laws of physics. These parameters include damping factor, model deviation, smoothing factor, and sensitivity parameters. Improved inverse algorithm will be use in numerical simulation and real data, which come from ambient noise of Taipei Basin of Taiwan, to achieve the near surface shear wave velocity structure. Compared with the earlier research results in this region, we find the same points and differences. By the process above, we verify the reasonability of the self-adaption parameters selecting, validity of the improved inverse algorithm and the reliability of the code. The improved algorithm provides a fast, self-adapted, less empirical and universal tool and method to study the near surface shear wave velocity structure.

8. Avoid self-citations (mostly early careers do it), but ultimately it does not add into your profile.

9. Malpractice: data collection, academic integrity, fieldwork, ethics, risk assessment, local level permissions, data manipulation, paid work, dignity and honesty.
 10. Selecting your co-authors: Are you adding someone who has not contributed at all or vice-versa? However, strong networking and collaboration is highly encouraged.
-

11. Never hold back or get demoralized – keep trying, editing, reading, improving and taking advice.

Rejection without in-depth review [EMID:b308e48839eb9e6f]

To: "Ahmed, Bayes" <bayes.ahmed@ucl.ac.uk>

Dear Dr. Ahmed:

Thank you for submitting your manuscript "Analyzing the 27 July 2021 rainfall-induced catastrophic landslide event at the Kutupalong Rohingya Camp in Cox's Bazar, Bangladesh" for possible publication in Landslides.

Several executive editors of the journal reviewed your manuscript during the initial screening process prior to sending the paper to in-depth review. As a result of this screening, your manuscript has been decided not to send out for in-depth review.

The number of papers submitted to Landslides has significantly been increased. As such, working load to the editors and reviewers who are voluntarily spending their time for the review/editorial work of Landslides has also been greatly increased. We are making our effort to avoid rejection after major revision as far as possible in order to efficiently utilize the effort of editors and reviewers to result those articles to successful publication. Furthermore, early decision on a rejected paper will allow more time for the authors to contribute their manuscript to other journals or publications.

Therefore, we have decided to send for in-depth review only those manuscripts most likely to be ultimately published in Landslides. Those manuscripts are selected on the basis of originality, quality, discipline, general significance, among others. I am sorry that we were not able to respond more positively to your submission, and I assure you that our decision does not reflect any doubt about the quality of the work reported in the manuscript.

I would like to thank you very much for sending your manuscript to us for consideration and wish you every success in finding an alternative place of publication.

Sincerely yours,

Kyoji Sassa
Editor-in-Chief
Landslides

12. Academic publishing industry is being questioned already, however, the surge of publications will be continuing in the next 10 years.
 13. Quality is more important than quantity. But, who will verify the quality? Do Research not Re-Search!
 14. Is it time to think about an alternative? [More emphasis on Impact!]
